## ABSTRACT

This booklet, last in a series of six, presents a descriptive statistical profile of American Indian populations residing in the United States and Alaska Native populations living in Alaska. It includes data on population size, family composition, housing, education, labor force status, occupation, income, and poverty status and is based primarily on information from the 1980 U.S. Census of Population and Housing. The data, presented in three sections, include: (1) social and economic characteristics of the American Indians in the United States; (2) social, economic, and housing characteristics of American Indians living on 10 selected U.S. reservations; and (3) social and economic characteristics of the Alaska Natives. Thirty-two graphs are presented and selected statistical data from each one are identified, highlighted, and summarized. Six additional tables present selected characteristics from the 25 largest American Indian reservations, based on information obtained from a supplementary questionnaire, and from the 10 largest Alaska Native villages, based on data obtained through the 1980 U.S. Census questionnaire. ---

The cover shows a stylized eagle designed by Homana Pawiki, a Hopi Pueblo currently employed with the U.S. Census Bureau, and her husband Peter Kretzmann. They presently reside in Conifer, Colorado. The symbols in the design signify the following: the solid dark triangular body at the top represents the earth; the spiral represents water; the wings represent air; and the four vertical lines at the bottom represent the four directions (North, South, East, and West).

# We, the First Americans

## Introduction

**We, the American Indians and Alaska Natives**, are the original inhabitants of America. Our land once was a vast stretch of forest, plains, and mountains that extended from the Atlantic to the Pacific Ocean and from the Arctic Circle to the tip of South America. In many Alaska Native villages across the immense relatively barren Alaska landscape, we still hunt, fish, and gather from the land, rivers, and seas, much as we have for thousands of years.

Our long and proud heritage continues in our many traditional foods, medicines, and names all Americans use. We have survived numerous disruptions of our lives and dislocations from our native habitats. Today, while still maintaining our tribal traditions and languages we strive to accept new technologies which address our needs.

This booklet entitled, "*We, the First Americans*," presents a descriptive profile of the American Indian and Alaska Native populations, including population size, jobs, family composition, housing, and other characteristics. The information is based on the 1980 Census of Population and Housing and is divided into three sections:

**Section 1, "*Social and Economic Characteristics of the American Indian Population in the United States*,"** focuses on the American Indian population. The topics covered include population, family composition, education, labor force status, occupation, income, and poverty status.

**Section 2, "*Social, Economic, and Housing Characteristics of the American Indian Population***

***Living on 10 Reservations***," focuses on the American Indian population living on the 10 reservations having the largest number of American Indians in 1980: Navajo, Pine Ridge, Gila River, Fort Apache, Tohono O'Odham (formally Papago), Hopi, Zuni Pueblo, San Carlos, Rosebud, and Blackfeet. This section shows information on population, education, health care, labor force status, income,

and housing characteristics.

**Section 3, "*Social and Economic Characteristics of the Alaska Native Population in Alaska*,"** provides a profile of the Alaska Native population (American Indians, Eskimos, and Aleuts) living in Alaska. The information covered in this section includes population, family composition, education, labor force status, occupation, income and poverty status.

The tables presented at the end of this booklet provide information comparable to that shown in previous sections for the 25 largest American Indian reservations and 10 largest Alaska Native villages.

The data in sections 1 and 3 are from the regular 1980 census questionnaire which gathered information on the entire population in the United States. Also, the discussion in these sections include data not shown in the charts, but which are available from other 1980 census reports. The information in section 2 is from a special supplementary questionnaire used in addition to the regular questionnaire on the 278 Federal and State reservations identified for the 1980 census and in the historic areas of Oklahoma (excluding urbanized areas), figure 11 is the exception because it contains data from the regular questionnaire. The tables shown in the back of the booklet are from both the regular and supplementary questionnaires.

## Section 1

# **Social and Economic Characteristics of the American Indian Population in the United States**

On April 1, 1980, the 1.4 million American Indians in the United States represented a sharp increase of 72 percent over the 1970 population total. From census to census, the size of the Indian population has been affected, in part, by such factors as the ways the Census Bureau has counted people, methods for collecting information on race, and differing procedures used to classify persons as American Indians. For instance, the increase from 1970 to 1980 cannot be attributed only to natural increase (births minus deaths). The following factors may have contributed to the higher 1980 population count of American Indians:

1. Improvements in the way the Census Bureau counted people on reservations in 1980.
2. The wider use of self-identification to obtain information on race throughout the country in 1980.
3. The greater propensity in 1980 than in 1970 for individuals, especially those of mixed Indian and non-Indian parentage, to report as American Indian on the census questionnaire.
4. The omission of the word "race" from the question used to identify racial groups (question 4 of the 1980 questionnaire) possibly leading to some misunderstanding of the information requested.

The potential effect of these factors upon the data should be considered in interpreting the changes from 1970 to 1980 in the size, distribution, and characteristics of the American Indian population presented in this section.

The following discussion, based on the 1980 census regular questionnaire, provides a statistical profile of the Nation's American Indian population.

Estimates of the number of American Indians have been made since the founding of the Nation, but it was not until 1860 that the Federal Government counted this group. At that time, Indians were counted if they had left their reservations and lived among other Americans. The 1890 census was the first to obtain a complete census of American Indians.

- In the first half of this century, the Indian population grew slowly from 237,000 in 1900 to 357,000 in 1950.
- The period from 1950 to 1980 was a time of rapid growth for Indians. The population increased by more than one million, numbering nearly 1.4 million in 1980.
- About one-half of the Indian population lived in the West in 1980, 27 percent in the South, 18 percent in the Midwest, and 6 percent in the Northeast. Between 1970 and 1980, the southern region was the only one to increase noticeably in the proportion of American Indians, rising from 25 percent to 27 percent.

Figure 1. American Indian Population: 1890 to 1980  
(Numbers in thousands)

About 500 American Indian tribes and bands were identified in the 1980 census. The census showed that the population size of these tribes varied greatly.

- In 1980, the only tribes with more than 100,000 persons were the Cherokee (232,080) and Navajo (158,633). Approximately 16 percent of all Indians reported as Cherokee and 11 percent as Navajo.
- The Sioux (78,608), Chippewa (73,602) and Choctaw (50,220) had populations of at least 50,000 persons; the Sioux and Chippewa tribes each comprised 5 percent of the Indian population, while the Choctaw accounted for 4 percent. The Pueblo, Iroquois Confederacy, Apache, Lumbee, and Creek all had 25,000 or more persons.
- The 1980 census showed that six tribes had a population between 10,000 and 25,000 persons. Most tribes—90 percent—had populations of less than 10,000.

Figure 2. Ten Largest American Indian Tribes: 1980

According to the 1980 census, most American Indians lived west of the Mississippi River.

- Two in three Indians lived in the 10 States with the largest Indian populations. Of these States, only North Carolina, Michigan, and New York are east of the Mississippi River.
- In 1980, more than half of the Indian population lived in just five States: California (198,275), Oklahoma (169,292), Arizona (152,498), New Mexico (105,976), and North Carolina (64,536).
- California was the State with the largest Indian population in 1980, climbing from third position in 1970. Between 1970 and 1980, Oklahoma dropped from first to second place, Arizona fell from second to third, and New Mexico stayed fourth.

Figure 3. Ten States With the Largest Number of American Indians: 1980

The American Indian population is young. The age distribution of the American Indian population differed substantially from that of the total population in 1980.

- Forty-four percent of the Indian population was under 20 years of age, compared with 32 percent of the Nation's total population.
- About 8 percent of all Indians were 60 years old or over in 1980, about half of the proportion (16 percent) for the total population.
- The median age of the Indian population was 22.9 years, considerably younger than the U.S. median age of 30.0 years. (The median age is the age where half the population is older and half younger.) The younger Indian population is partially the result of higher fertility rates.

Figure 4. Percent Distribution of American Indians, by Age: 1980

In 1980, the vast majority of American Indian families had both a husband and wife present. However, the proportion of families maintained by a female householder without a husband present was higher than the national figure.

- Among the Nation's 300,000 Indian families in 1980, seven in 10 were married couples living together, compared with slightly more than eight in 10 for all of the Nation's 58.9 million families.
- Similar to the national trend, the proportion of American Indian families maintained by a female householder without a husband present moved upward during the last decade and reached 23 percent in 1980. This proportion was considerably more than the national figure of 14 percent.
- American Indian families were larger and more likely to have children than all families. In 1980, about two thirds of American Indian families had children under 18, compared with one-half for all families.

Figure 5. Percent of American Indian Families, by Type of Family: 1980

The educational attainment levels of American Indians improved significantly during the 1970's, but remained considerably below the levels of the total population.

- In 1980, 56 percent of the 691,000 Indians aged 25 and over had completed four years of high school or more, compared with only 33 percent in 1970. Despite the advances, the 1980 proportion was still below the 67 percent for the total population.
- Indians were not as likely as the entire U.S. population to have completed four or more years of college: about 8 percent for Indians and about 16 percent for the total population.

Figure 6. Educational Attainment for American Indians: 1980  
(Persons 25 years and over)

The 1980 census showed that American Indians were not as likely to participate in the labor force (defined as persons employed or unemployed and actively looking for work) as the total population.

- Overall, 59 percent of the 986,000 Indians 16 years old and over were in the labor force in 1980, three percentage points below the 62 percent rate for the total population.
- Seventy percent of Indian males aged 16 years and over were in the labor force, compared with more than 75 percent for all males.
- American Indian women have shared in the national trend of increased labor force participation by women. The proportion of Indian women in the labor force increased sharply from 35 percent in 1970 to 48 percent in 1980. The rate for all women in 1980 was only slightly higher at just under 50 percent.

Figure 7. Labor Force Participation Rates for American Indians, by Sex: 1980  
(Persons 16 years and over)

In 1980, half a million American Indians and 97.6 million in the total population were employed in various occupations. The distribution of employed American Indians among the six major occupational categories was different from that of the general U.S. population.

- A smaller proportion of Indians as compared with Americans in general were employed in managerial and professional specialty occupations: 16 percent for Indians and 23 percent for the total population. This was also true for technical, sales, and administrative support jobs—24 percent and 30 percent, respectively.
- A larger proportion of Indians than of the total population were employed in the jobs of precision production, craft, and repair (15 percent versus 13 percent); operator, fabricator and laborers (23 percent versus 18 percent); and service (18 percent versus 13 percent).
- Indians were slightly more likely than the total population to be in farming, forestry, and fishing jobs: 4 percent and 3 percent, respectively.

Figure 8. Percent Distribution for Major Occupations for American Indians: 1980  
(Persons 16 years and over)

The median money income levels among Indian families in 1979 were below those of the Nation as a whole. Money income levels of families are related to a number of factors, such as number of workers in the family, educational attainment levels, and family composition. The median money income does not include noncash benefits such as housing, food, or medical assistance.

- According to the 1980 census, the median money income of Indian families was \$13,680 in 1979, compared with \$19,920 for the total population. Stated another way, for every \$100 U.S. families received, an Indian family received \$69.
- The median income of Indian married-couple families was \$16,500 or 76 percent of the \$21,640 for all married-couple families.
- About one-fourth of all Indian families were maintained by female householders with no husband present in 1980. The median income for these families was \$7,200, about 72 percent of the median income of all families maintained by women without husbands at \$9,960.

Figure 9. Median Family Income in 1979 by Type of Family for American Indians: 1980

The proportion of American Indian persons and families living below the official Government poverty level in 1979 was considerably higher than that of the general population; the poverty threshold for a family of four was \$7,412. The definition of poverty status does not include the value of noncash benefits such as housing, food, or medical assistance.

- In 1979, about 400,000 Indians were living below the poverty level, representing 28 percent of the total Indian population. The national poverty rate was about 12 percent (27.4 million persons).
- Twenty-four percent or 79,000 Indian families were in poverty in 1979, compared with less than 10 percent of the families (5.7 million) in the general population.

Figure 10. Poverty Rates in 1979 for American Indian Persons and Families: 1980

## Section 2

# **Social, Economic, and Housing Characteristics of the American Indian Population Living on 10 Reservations**

The discussion that follows is an interpretation of information on American Indians from the 1980 census supplementary questionnaire; figure 11 is the only exception because it contains data from the regular questionnaire. This questionnaire was used exclusively on the 278 Federal and State reservations identified for the 1980 census and in the historic areas of Oklahoma (excluding urbanized areas).

Information was obtained by direct interviews with respondents in households that had received the regular short form census questionnaire and had at least one American Indian, Eskimo, or Aleut household member. Approximately 75 percent (more than 100,000 households) of American Indians, Eskimos, and Aleuts living on reservations and in certain parts of Oklahoma received the supplementary questionnaire.

The questionnaire, developed by the U.S. Bureau of the Census with the help of the Office of Management and Budget Task Force on Indian Census, obtained additional information on American Indians beyond the statistics from the regular 1980 census questionnaire. The additional information included tribal enrollment, place of residence one year earlier, year moved onto reservation, health services received, usual source of health care and travel time to it, health care payments, main reason for not working a full year in 1979, types of benefits received in 1979, electric lighting, and flooring and exterior wall materials.

In addition, several questions from the regular questionnaire, such as school enrollment and tribal affiliation, were expanded on the supplementary questionnaire. The data from the supplementary questionnaire may differ from comparable data from the regular census questionnaire.

The charts and text that follow are restricted to the 10 reservations—Navajo, Pine Ridge, Gila River, Fort Apache, Tohono O'Odham (formally Papago), Hopi, Zuni Pueblo, San Carlos, Rosebud, and Blackfeet—having the largest number of American Indians. The discussion also refers to American Indians, although the data include the 104 Eskimos and Aleuts living on reservations in 1980, only 18 of the 104 Eskimos and Aleuts lived on these 10 reservations.

The information on housing units (Figures 19-22) include only those households where the householder or spouse was American Indian, Eskimo, or Aleut.

See the tables at the end of this report for additional information on the 25 largest reservations (including these 10) and the 10 largest Alaska Native villages.

The 1980 census supplementary questionnaire showed that one-third of all American Indians lived on reservations and in the historic areas of Oklahoma (excluding urbanized areas).

- One-fourth or 340,000 of all American Indians lived on reservations in 1980. Reservations are areas with boundaries established by treaty, statute, and/or executive or court order.
- The American Indian population in the historic areas of Oklahoma (excluding urbanized areas) numbered 116,000, comprising 9 percent of the total American Indian population. The historic areas consist of the former reservations which had legally established boundaries during the 1900-1907 period.

Figure 11. Distribution of the 1.4 Million American Indians: 1980

The number of American Indians living on the 278 reservations varied substantially. Only 10 reservations had more than 5,000 American Indians; most had fewer than 1,000.

- Only the Navajo Reservation had more than 100,000 American Indians, while the Pine Ridge Reservation was the only other reservation with more than 10,000 American Indians in 1980.
- An additional eight reservations had more than 5,000 American Indians: Gila River, Fort Apache, Tohono O'Odham, Hopi, Zuni Pueblo, San Carlos, Rosebud, and Blackfeet.
- Six of the 10 reservations with the largest American Indian population were entirely or partially located in Arizona.
- The 166,000 Indians living on the 10 largest reservations accounted for about half of all American Indians living on reservations.

Figure 12. Ten Reservations With the Largest Number of American Indians: 1980

Overall, more than 100,000 American Indians aged 5 to 19 living on reservations were enrolled in school. Less than one-fourth (24 percent) of these students were enrolled in Bureau of Indian Affairs (BIA) or tribal school, the remaining three-fourths attended public or private schools in 1980. The proportion in BIA or tribal schools varied substantially by reservation. The BIA and tribal schools were operated or controlled by BIA or by a tribal government.

- Of the 10 reservations, Pine Ridge had the highest proportion (59 percent) of American Indian students enrolled in BIA or tribal schools, followed by Hopi at 56 percent and Tohono O'Odham at 46 percent.
- Blackfeet (3 percent) and Zuni Pueblo (5 percent) had the lowest proportions of American Indians enrolled in BIA or tribal schools.

Figure 13. **Percent of American Indians Enrolled in School Who Are Attending BIA or Tribal Schools, for Selected Reservations: 1980**  
(Persons 5 to 19 years old)

On all 10 reservations, the proportion of American Indian adults with high school diplomas was no higher than 50 percent.

- Forty-three percent of the 135,630 American Indians aged 25 and over living on reservations were high school graduates.
- Blackfeet and Rosebud had the highest proportion of high school graduates at 50 percent.
- Tohono O'Odham, Fort Apache, and Navajo had the lowest proportions of high school graduates at about 35 percent.

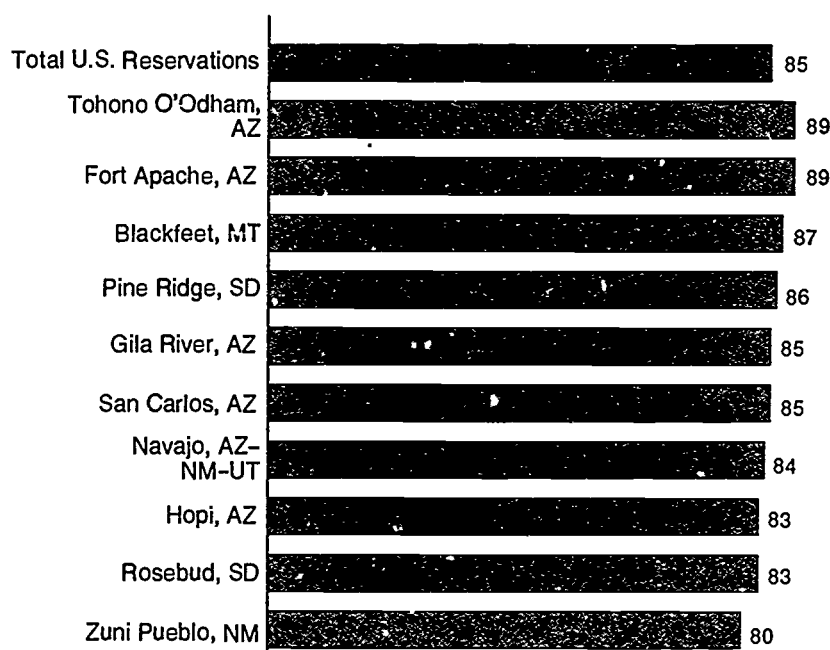

Figure 14. **Percent American Indian High School Graduates, for Selected Reservations: 1980**  
(Persons 25 years old and over)

The 1980 census was the first to collect information on health care for American Indians residing on reservations. Persons were classified as having received health care if they received medical and/or dental services from a health care provider, such as a doctor, dentist, nurse, pharmacist, or community health representative at any time during the last 12 months.

- More than four in five Indians on reservations received health care.
- The highest proportion of American Indians receiving health care was on the Tohono O'Odham and Fort Apache Reservations each at more than 88 percent.
- None of the 10 reservations had less than 80 percent receiving health care.

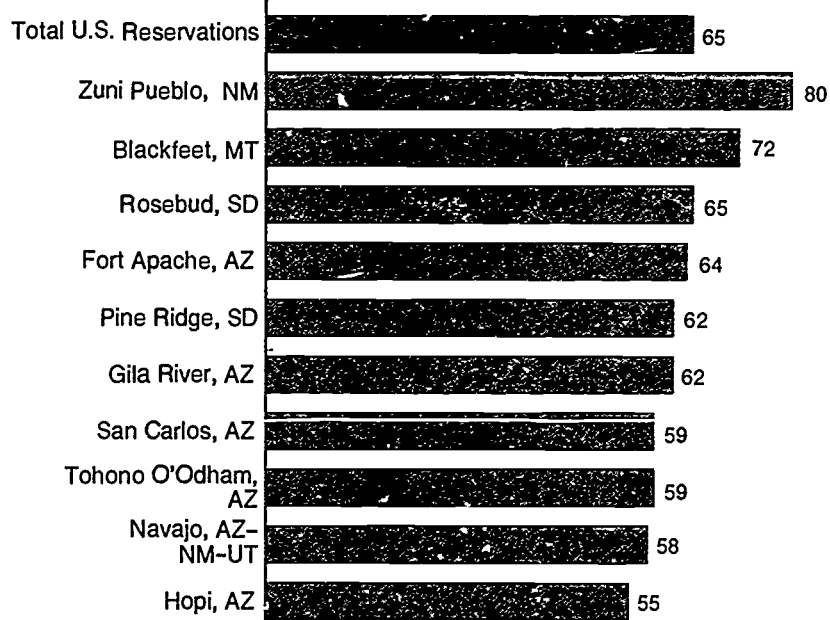

Figure 15. Percent of American Indians Who Received Health Care in the Last 12 Months, for Selected Reservations: 1980

There were substantial differences in labor force participation rates in 1979 for American Indians 16 years old and over on the 10 reservations. Labor force, as defined in the supplementary questionnaire, included persons employed or unemployed and actively looking for work, as well as individuals who raised crops and/or livestock or sold or traded traditional crafts such as rugs, pottery, and jewelry.

- Of the 199,280 American Indians on reservations, just more than 65 percent participated in the labor force in 1979.
- Zuni Pueblo had the highest proportion of American Indians (80 percent) participating in the labor force in 1979, followed by Blackfeet at 72 percent.
- No more than 59 percent of the Indian population was in the labor force on the San Carlos, Tohono O'Odham, Navajo, and Hopi Reservations.

Figure 16. Labor Force Participation Rates in 1979 for American Indians, for Selected Reservations: 1980  
(Persons 16 years and over)

The median family money income in 1979 ranged from about \$7,000 to nearly \$11,000 among the 10 reservations. The money income levels of families are related to a number of factors, such as number of workers in the family, educational attainment levels, and family composition. The median money income does not include noncash benefits such as housing, food, or medical assistance.

- The median money income in 1979 was about \$10,000 for Indian families residing on all reservations.
- Blackfeet (\$10,580) and Zuni Pueblo (\$10,350) had the highest median incomes as well as the highest labor force participation rates.
- Six reservations—Rosebud, Navajo, Hopi, San Carlos, Gila River, and Pine Ridge—had median family incomes between \$7,900 and \$9,000.
- Tohono O'Odham, one of the reservations with a relatively low labor force participation rate, had a low median family income of about \$7,000.

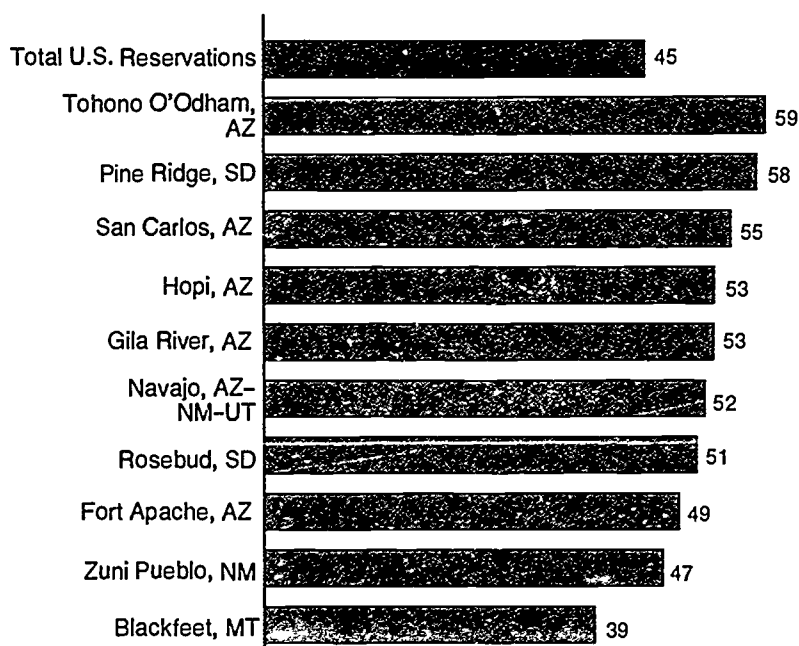

Figure 17. Median Money Income in 1979 for American Indian Families, for Selected Reservations: 1980

As with educational attainment and median income, there were vast differences in poverty rates in 1979 among the 10 reservations; the poverty threshold for a family of four was \$7,412. The definition of poverty status does not include the value of noncash benefits such as housing, food, or medical assistance.

- A very high proportion, 45 percent, of the 336,280 American Indians residing on reservations were living below the poverty level in 1979.
- About 6 in 10 persons on the Tohono O'Odham and Pine Ridge Reservations were in poverty.
- At least five in 10 Indians were in poverty on San Carlos, Hopi, Gila River, Navajo, and Rosebud Reservations.
- The Blackfeet Reservation had the lowest percentage of American Indians in poverty at 39 percent, still a high proportion.

Figure 18. Poverty Rates in 1979 for American Indians, for Selected Reservations: 1980

In 1980, more than 81,000 American Indian housing units on reservations lacked complete plumbing facilities. A housing unit having complete plumbing facilities was defined as having hot and cold piped water, a flush toilet, and a bathtub or shower inside the unit for the exclusive use of its occupants.

- Almost one-fourth of American Indian housing units on reservations lacked complete plumbing facilities.
- More than half of the housing units on the Hopi, Tohono O'Odham, and Navajo Reservations were without complete plumbing facilities.
- Among the 10 reservations, the lowest proportions of housing units without complete plumbing facilities were on the Rosebud (9 percent) and Blackfeet (6 percent) Reservations.

Figure 19. Percent of American Indian Housing Units Without Complete Plumbing, for Selected Reservations: 1980

Among the 10 reservations, the proportion of American Indian housing units without an indoor toilet showed tremendous differences, ranging from 4 percent to 56 percent.

- More than one-fifth of the Indian houses on reservations lacked an indoor toilet.
- At least 50 percent of the homes on three reservations—Hopi, Tohono O'Odham, and Navajo—were without an indoor toilet.
- At 4 percent, Blackfeet and Zuni Pueblo had the lowest proportions of their housing units without indoor toilets.

Figure 20. Percent of American Indian Housing Units Without Indoor Toilet, for Selected Reservations: 1980

In 1980, there were some major differences in the proportions of American Indian housing units without telephones among the 10 reservations. The proportions ranged from 37 percent to 87 percent.

- More than half (56 percent) of the American Indian housing units on reservations had no telephone.
- Relatively large proportions of housing units on the Tohono O'Odham and San Carlos Reservations were without a telephone: 87 percent and 83 percent, respectively.
- At least two-thirds of the houses were without telephones on six of the 10 reservations.
- Slightly more than one-third of Zuni Pueblo housing units were without a telephone.

Figure 21. Percent of American Indian Housing Units Without a Telephone, for Selected Reservations: 1980

As with plumbing and indoor toilets, there were wide differences in the percentage of housing units without electric lighting among the 10 reservations. The proportions ranged from 1 percent to 47 percent.

- Sixteen percent of all American Indian housing units on reservations lacked electric lighting.
- Hopi and Navajo had the highest proportion of homes without electric lighting at nearly 50 percent.
- More than one in five residences on Tohono O'Odham did not have electric lighting.
- Seven reservations had 10 percent or less of their housing units without electric lighting; Blackfeet had the lowest proportion at 1 percent.

Figure 22. Percent of American Indian Housing Units Without Electric Lighting, for Selected Reservations: 1980

---

### Section 3

## **Social and Economic Characteristics of the Alaska Native Population in Alaska**

On April 1, 1980, there were 64,103 Alaska Natives living in Alaska, most were Eskimos (34,144) and fewer were American Indians (21,869) and Aleuts (8,090). In 1970, the Alaska Native population numbered 50,814. There were 28,186 Eskimos, 16,276 American Indians, and 6,352 Aleuts counted in Alaska in 1970.

The increase (26 percent) in the Alaska Native population during the 1970's was attributed to factors such as natural increase (births minus deaths), improvements in the ways the Census Bureau counted individuals, and the wider use of self-identification to obtain information on race.

The following information is based on the 1980 census regular questionnaire that focuses on living conditions of Alaska Natives (American Indians, Eskimos, and Aleuts) in Alaska.

Since 1880, the U.S. Census Bureau has counted Alaska Natives in the decennial censuses.

- The growth of the Alaska Native population was relatively slow from 1890 to 1950. During that time, the population increased by only about 10,000 persons, from 23,531 to 33,863.
- The period from 1950 to 1980 was a time of rapid growth for Alaska Natives. The population rose by more than 30,000 persons and numbered 64,103 in 1980.

Figure 23. Alaska Native Population in Alaska: 1890 to 1980

The Alaska Native population comprises Eskimos, American Indians, and Aleuts.

- In 1980, more than half of all Alaska Natives were Eskimos, about one third were American Indians, and slightly more than one-tenth were Aleut.
- The two main Eskimo groups, Inupiat and Yupik, are distinguished by their language and geography. The former live in the north and northwest parts of Alaska and speak Inupiaq, the latter live in the south and southwest and speak Yupik.
- The main American Indian tribes are the Alaskan Athabaskan in the central part of the state, and the Tlingit, Tsimshian, and Haida in the southeast.
- The Aleuts live mainly in the Aleutian Islands.

Figure 24. Distribution of the 64,000 Alaska Natives in Alaska: 1980

After 1971, all of Alaska (except the Annette Islands Reserve) was divided into 12 geographically defined Alaska Native Regional Corporations. An Alaska Native Regional Corporation is a corporate entity organized to conduct business for profit. The boundaries of these regions have been legally established.

- In 1980, the largest number of Alaska Natives lived in the Calista Regional Corporation (13,594 persons) and the smallest number lived in Ahtna (549 persons).
- Of the 12 Regional Corporations in Alaska, Calista had the highest concentration of Alaska Natives at 87 percent of the total population. Cook Inlet had the second largest number of Alaska Natives (10,854); however, this group comprised only a small share (5 percent) of the overall population in the corporation's area.

Figure 25. Alaska Natives in Alaska Native Regional Corporations: 1980

In a State that was, on average, much younger than the national average, Alaska Natives were younger still.

- Almost half (47 percent) of Alaska Natives were under 20 years of age, compared with 36 percent of Alaska's total population.
- Forty-seven percent of Alaska Natives and 59 percent of the State's population were 20 to 59 years old.
- Seven percent of Alaska Natives and 5 percent of Alaska's total population were 60 years old or older.
- The median age of Alaska Natives was 21.4 years, compared with 26.1 years for the total State population.

Figure 26. Percent Distribution of Alaska Natives in Alaska, by Age: 1980

Alaska Natives had proportionately fewer married-couple families and more families with a female householder and no husband present than did the State as a whole.

- Only 68 percent of the 11,700 Alaska Native families consisted of a husband and wife; this was true for 84 percent of the 95,560 total families in Alaska.
- Among Alaska Natives, American Indians had the smallest percentage of married-couple families at 65 percent, while Aleuts had the largest at 71 percent.
- The proportion of families with a female householder and no husband present was twice as high among Alaska Natives as it was among Alaska's total population: 22 percent and 11 percent, respectively.
- One-fourth of American Indian families and one-fifth of Eskimo and Aleut families each were maintained by female householders.

Figure 27. Type of Family for Alaska Natives in Alaska: 1980

Although Alaska Natives have made great strides in education during this century, Alaska Natives remain less likely to have high school diplomas or college degrees than other Alaskans.

- Forty-six percent of the 27,460 Alaska Natives 25 years or older had completed high school, compared with 83 percent statewide.
- Less than four percent of Alaska Natives were college graduates, while the statewide total was 21 percent.
- Among Alaska Native groups, American Indians and Aleuts were more likely to have a high school education and a college degree than were Eskimos.

Figure 28. Educational Attainment for Alaska Natives in Alaska: 1980

(Persons 25 years and over)

Among Alaska Natives in 1980, labor force participation (defined as persons employed or unemployed and actively looking for work) was substantially lower than for Alaska as a whole.

- Less than half of the 40,960 Alaska Natives 16 years and older were in the labor force in 1980, compared with about 72 percent of Alaska's total population.
- Sixty percent of all females in the State of Alaska and 43 percent of Alaska Native females were in the labor force in 1980. Similarly, 82 percent of Alaska's total males 16 and over were in the labor force, compared with only 55 percent of Alaska Native males.
- American Indians had the highest labor force participation rates of the three Alaska Native groups; this may be because they were more likely to live in urban areas. Eskimos who tend to live in more rural areas had the lowest rates.

Figure 29. Labor Force Participation Rates for Alaska Natives in Alaska, by Sex: 1980 (Persons 16 years and over)

Alaska Natives were more likely than the total State's population to be in service jobs or to be operators, fabricators, or laborers and less likely to be in managerial and professional jobs.

- Among the 15,760 employed Alaska Natives 16 years and older, 19 percent were in managerial and professional occupations, compared with 29 percent for the State as a whole.
- Alaska Natives were somewhat less likely than the State's total population to be employed in technical, sales, and administrative jobs: 29 percent and 31 percent, respectively.
- Alaska Natives were more likely than the statewide population to be in service jobs (22 percent and about 14 percent, respectively) and to be operators, fabricators, or laborers (15 percent and about 11 percent, respectively).

Figure 30. Percent Distribution for Major Occupations for Alaska Natives in Alaska: 1980 (Persons 16 years and over)

The median money income of Alaska Native families has remained below the average for Alaska as a whole. The median money income levels of families are related to a number of factors, such as number of workers in the family, educational attainment levels, and family composition. The median money income does not include the value of noncash benefits such as housing, food, or medical assistance.

- Alaska, with a median family income of \$28,400, had the highest income of any State. For Alaska Natives, the median family income was \$15,920, only 56 percent of the median income for the State.
- Aleut families earned an average of \$21,220, followed by American Indians (\$17,160) and Eskimos (\$13,510).
- Among married-couple families, median income levels were \$31,030 for the State total and \$19,710 for Alaska Natives.

Figure 31. Median Family Income in 1979 by Type of Family, for Alaska Natives in Alaska: 1980

According to the 1980 census, a sizable proportion of Alaska Natives lived in poverty in 1979, when the poverty threshold for a family of four was \$7,412. The definition of poverty status does not include the value of noncash benefits such as housing, food, or medical assistance.

- About 1 in 4 or 16,170 Alaska Native persons were poor, compared with about 1 in 10 or 41,620 for the State as a whole.
- About 3 in 10 Eskimos lived in poverty, compared with 2 in 10 Aleuts and American Indians.
- The proportions of Alaska Native families (25 percent) and families statewide (9 percent) living below the poverty level were about the same as the proportions for persons living below the poverty level: 26 percent for Alaska Native persons and 11 percent for persons statewide.

Figure 32. Poverty Rates in 1979 of Alaska Native Persons and Families in Alaska: 1980

---

## Summary

The statistical portrait of the American Indian and Alaska Native populations in the United States, presented by the 1980 Census of Population and Housing information, shows a fast-growing and young population. Both are very diverse with the American Indian population composed of hundreds of tribes. These groups still lag behind the rest of the Nation in many important respects. However, historical census data reveal that significant progress has been made over the years.

---

The following tables show data from the 1980 census on selected characteristics for the 25 largest American Indian reservations from the supplementary questionnaire and 10 largest Alaska Native villages from the regular census questionnaire.

---
